

Arena Bike Shelter

A modular and durable steel porch for bikes and motorcycles.

It is composed of a load-bearing steel structure with a base plate and an inclined steel column equipped with an inclined steel tube support. Both support a frame with a corrugated sheet metal cover with powder-coated extruded aluminium edges. The roof is tilted to easily drain rainwater inside an extruded aluminium. The roof can accommodate a metal false ceiling and a LED lighting system.

Customisation
available

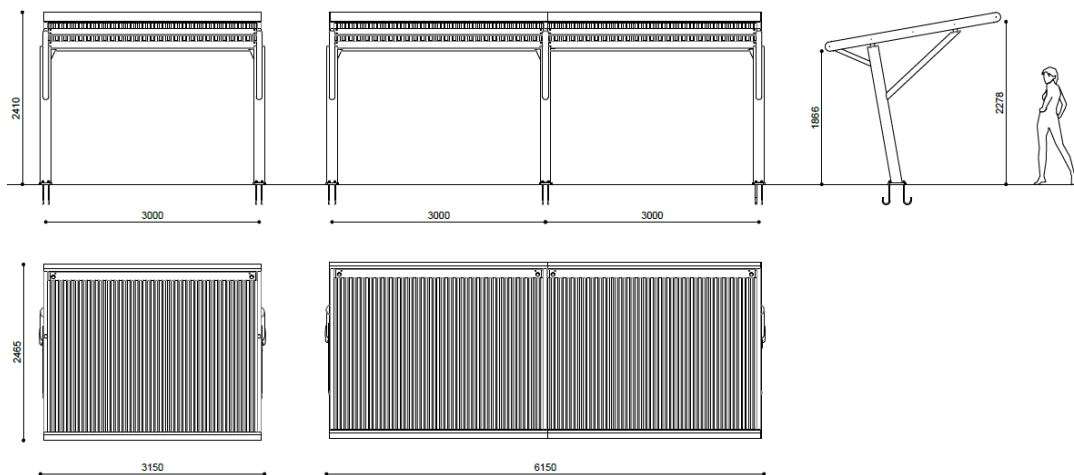

Quality & durability

- Strong tubular steel supports with a base plate.
- Corrugated sheet metal cover with powdercoated extruded aluminium edges.
- Tilted roof for easy rainwater draining.
